| POTENTIAL HEALTH EFFECTS | See below and Section 11 for additional information | | | | | |
| Likely Routes of Exposure | See below | | | | | |
| EYE | May cause irritation (tear formation and redness) if dust gets in eyes. | | | | | |
| SKIN | Not absorbed by the skin, but may cause dryness if prolonged exposure. | | | | | |
| INGESTION | Ingestion of small to moderate quantities is not considered harmful, but may cause irritation of the mouth, throa and stomach. | | | | | |
| INHALATION | Acute inhalation can cause dryness of the nasal passage and lung congestion, coughing and general throat irritation. Chronic inhalation of dust should be avoided. | | | | | |
| CHRONIC EFFECTS | Chronic inhalation of crystalline silica dust in excess of the Threshold Limit Value (TLV) recommended by the American Conference of Governmental Industrial Hygienists (ACGIH)(.025mg/m³) or in excess of the Permiss Exposure Limit (PEL) established by OSHA (0.050mg/m³), over a prolonged number of years may contribute silicosis. Crystalline silica, when inhaled as respirable dust, has been classified in a 1997 monograph (Volum 68, "Silica") of the International Agency for Research on Cancer (IARC) as carcinogenic to humans over prolonged and sustained exposure. | | | | | |
